

ESET Smart Security 4 Business Edition + Remote Administrator

Maintain the highest level of security across all of your networks

ESET Smart Security® combines an advanced management console and award-winning ThreatSense® engine with firewall and antispam modules that stop plain and SSL-encrypted network- and email-borne threats. Automatic, frequent signature updates and proactive heuristic technologies let your users focus on business while you remain confident your company’s infrastructure is protected. Honored with a “★★★★★” rating by *SC Magazine* (January 2009), and ranked highest on *Forbes’* list of best-in-class antivirus products, ESET Smart Security has the proven power to protect your company’s valuable data and reputation.

Endpoint security management made easy

Ease of management is as critical as the effectiveness of your endpoint security solution. ESET® Remote Administrator 4 provides a comprehensive management console so you can control your entire network from one place — whether you support ten computers or thousands. Installation, updates, alerts, reports and other tasks are all easily managed from intuitive screens. ESET Remote Administrator has a small footprint and is highly scalable. It makes managing our security solutions simple for businesses of all sizes.

KEY FEATURES — ESET SMART SECURITY 4

Fully integrated protection	ESET Smart Security integrates our powerful antivirus engine with state-of-the-art personal firewall and antispam modules — offering comprehensive protection to the workstations across your network.
Extremely light system footprint	ESET Smart Security is so light, your users will not even notice it running.
Advanced archive scanning	Threats don’t always enter where you expect. ESET Smart Security can scan into layers of compressed files to ferret out malicious software. Users can control search depth, file size, archive size and timeout of archive scans.
Encrypted communication control	Scanning SSL-encrypted HTTP and POP3 protocols defeats even threats that hide from plain sight.
Enhanced portable computer support	Enhanced settings for portable computers allow tasks to be postponed when the computer is running on battery power.
ESET SysRescue	Creates rescue CDs, DVDs or USB drives for cleaning unstable, infected systems.

KEY FEATURES — ESET SMART SECURITY 4

ESET SysInspector™ integration	Administrators will love our advanced diagnostic tool for taking “deep-dive” snapshots of systems. Files and processes are color coded in scan logs to make it easy for IT admins to identify potential threats in the system.
Uninstall password protection	Password protection that prevents ESET Smart Security from being uninstalled by unauthorized employees or visitors.
Extended email client support	Native support for Microsoft Outlook, Microsoft Outlook Express, Mozilla Thunderbird 3*, Opera 10*, Windows Live Mail and Windows Mail makes messaging security simple. POP3 and IMAP protocols support delivers the same protection to other email clients.
ESET self-defense and HIPS	ESET Smart Security has built-in technology to prevent malicious software from corrupting or disabling it. Unauthorized attempts to modify your OS or applications are actively blocked through a combination of advanced behavioral analysis and network filtering that monitors your system processes, files and registry keys.
Removable media access control	Protects against infections from USB drives, floppies, CDs and DVDs.
Firewall profiles and trusted network zones	Easy-to-configure firewall profiles allow administrators to define firewall policy for different environments. Automatic switching of firewall profiles can be triggered by trusted zone authentication or identification by local network configurations, applying the appropriate firewall policies at all times.*
Trusted zone authentication	Identify trusted network zones by network configurations (a configurable combination of host/DNS/DHCP server IP address, wireless SSID, connection profile, etc.) or securely authenticate into a network using ESET Authentication Server.*
Support for Cisco Network Admission Control	Regulatory compliance is simplified with native support for Cisco NAC.
Mirror updating	Mirror servers make it easy to manage distribution of signature database updates to all ESET products within the network, saving you valuable time and bandwidth.

* Available with version 4.2 and later.

KEY FEATURES — ESET REMOTE ADMINISTRATOR

Group management	Avoid unregistered clients by synchronizing group structure with Active Directory. Simplify filtering and reporting processes and build notification and policy rules with static or parametric groups. Parametric groups update dynamically to include clients that meet specified conditions, taking the work out of searching for endpoints that require attention.
Simplified remote installation	Close security gaps and free your IT staff from tedium with improved searching for unregistered clients and create tasks to push install clients in parallel without human intervention.
Centralized quarantine management	Restore or delete quarantined objects from the console based on specified criteria or exclude them from further scanning. Having top-down visibility ensures consistency in quarantine policy across all endpoints.
Policy management	Define and enforce policies consistently throughout your network. Policy Manager makes it easy to import/export, apply, inherit and merge policies in a variety of ways. Time-saving replication policies allow multiple ESET Remote Administrator servers to synchronize efficiently in wide area network deployments.
Cross-platform management	Remotely manage from a single console all endpoints running current and previous versions of ESET Smart Security and ESET NOD32® Antivirus for Windows, as well as upcoming releases of ESET NOD32 Antivirus 4 for Mac and Linux and next-generation mobile security products.
Notification management	Notifications are highly customizable and allow for monitoring of a broad range of incidents (status of clients, possible virus outbreak or network attack, new client event, finished task, license expiration or server errors and warnings). Notification actions include email, SNMP Trap, launch on server and log entry.

SYSTEM REQUIREMENTS

ESET Remote Administrator Console

32-bit operating systems	Windows NT4 SP6 and later
64-bit operating systems	Windows XP and later
Databases	Microsoft Access (built-in), MySQL 5.0, ORACLE 9i, MSSQL 2005
Windows installer	2.0

ESET Remote Administrator Server

32-bit operating systems	Windows NT4 SP6 and later
64-bit operating systems	Windows XP and later
Databases	Microsoft Access (built-in), MySQL 5.0, ORACLE 9i, MSSQL 2005
Windows installer	2.0
Internet Explorer	Recommended 6.0, minimum 4.0 (some reports may not be displayed correctly)

ESET Smart Security 4 — Business Edition

Processors supported	Intel or AMD x86 / x64
Operating systems	Microsoft Windows 2000 SP4, Microsoft Windows XP SP3, Microsoft Windows Vista SP2, Microsoft Windows 7, Microsoft Windows Server 2000, Microsoft Windows Server 2003, Microsoft Windows Server 2008
Memory	45 MB
Disk space	36 MB (download) / 50 MB (installation)
